Important Saver Day Updates

Routine healthcare is a vital part of responsible horse ownership, and our Agnew Equine Saver Days are designed to support owners by offering vaccinations, dentals and general examinations at reduced rates.

Each year we review our Saver Day pricing. Despite the significant inflation of recent years, we have held our prices steady since 2022. After four years, a small adjustment is now needed to reflect rising costs and ensure we can continue offering this service long-term.

From February, Saver Day rates will increase by £5 per service. We have kept this increase minimal so that preventative care remains affordable and accessible for everyone.

Saver Days run on Tuesdays and Thursdays, appointments can be booked as AM or PM, the assigned vet is selected by our team, and visit fees are included in all Saver Day prices.

3 Services

- Vaccination, Dental Exam and Rasp, and General Examination / Health Check (one horse): £145

2026 Strategic Worm Packs!

Each Worm Pack includes:

3 x Worm Egg Count Kits

We recommend samples are collected and submitted in:

- ✓ March/April
- ✓ June/July
- ✓ September/October

1 x Targeted treatment of Equest Premix, to be given in late autumn or early winter. Tapeworms and inhibited small redworm cannot be accurately assessed by WEC's, so this treatment is essential.

Our Strategic Worm Packs are not only effective, but also excellent value. Each pack includes expert advice from our veterinary team, with professional interpretation of all WEC results.

Worm packs cost £76.50 per pack and include *FREE SHIPPING*

Care About Cushing's Changes

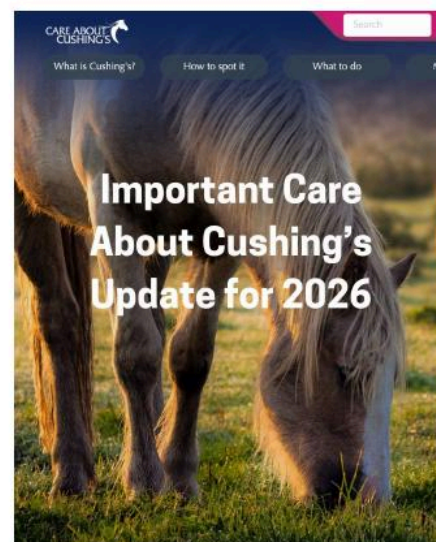

Boehringer Ingelheim's Care About Cushing's initiative, which many of our clients use to access *free diagnostic and monitoring testing for Equine Cushing's (PPID), is changing. The scheme will now move to a more focused free PPID testing campaign, concentrating on spring and autumn only.

From 1 February 2026:

- ✓ **Free*** initial diagnostic PPID testing will be available **ONLY** in Spring (March–April), when laminitis risk is highest, and Autumn (September–October), when ACTH testing is most diagnostically accurate.
- ✓ **A new free*** dose-checker test will be introduced from 4–6 weeks after starting treatment, to confirm whether the prescribed medication dose is appropriate.
- ✓ **Free*** Annual monitoring tests will take place in spring or autumn - a year after your dose-checker**

*Free ACTH laboratory fees only. Other visit charges may apply.

** Horses already on treatment before February 2026 will remain eligible for their annual monitoring test at any time of year.

Introducing the 2026 Agnew Equine Sponsored Riders!

We are excited to be launching something new for 2026 at Agnew Equine: our Sponsored Riders programme! Sammy Bloor, in dressage, and Rachael Shubotham, in showjumping, will be sharing their equestrian journeys with us, from preparation at home to competition days and everything in between. Follow us on social media to keep up with their updates and gain a real insight into life in the sport and what it takes to stay competitive!
